CLEANSALL®

Innovation

It is cost effective and removes pollutants before they reach the ocean, waterways and wetlands and it was created right here at the University of South Australia.

The CleansAll® Gross Pollutant Trap (GPT) was created by the Urban Water Resources Centre. It is licensed to Rocla Water Quality in Australia and is sublicensed in New Zealand and Malaysia.

Opportunity:

The CleansAll® GPT is a market leader in sales in Australia, New Zealand and Malaysia. It is the most cost effective product available and is recognised as equivalent to the highest performing system for pollutant capture performance.

Commercial Achievements

- The CleansAll GPT is a novel product with unique features protected by granted patents in Australia, US, UK and NZ and a registered design in Malaysia.
- Through its licence to Rocla and sublicences the product generates royalties substantial for the University of South Australia, with some of these funds being reinvested in further promising research.
- Rocla continues to work collaboratively with the Urban Water Resources Centre to refine the CleansAll and develop the next generation of Gross Pollutant Traps.
- ITEK is communicating with the Urban Water Resources Centre about commercialising new technologies currently under development.
